Protfolio:-Sayyami Gothe — Software Engineer | Full Stack & Generative AI Developer

Software Engineer

Full Stack Developer specializing in **React.js, FastAPI, and Generative AI**, with experience in building secure, scalable applications featuring **RAG pipelines, vector search, LLM integration, PostgreSQL, and REST APIs**. Eager to contribute to innovative AI-driven products while continuously expanding expertise in modern AI technologies.

EDUCATION

B.Tech in Computer Engineering **2021 –2025**
Government College of Engineering Jalgaon. **CGPA– 7.9**

Higher Secondary - Class 12 **2020- 2021**
Vidya Vihar High-School, Chandrapur Maharashtra. (Percentage: **96.17%**)

TECHNICAL SKILLS

Languages: SQL,JavaScript, HTML/CSS, GSAP,Python
Frameworks: React ,Bootstrap ,SCSS,Next-JS,FAST-API,GEN-AI, PostgressSQL,PG-Vector,JSpreadsheet
Developer Tools: Git, Docker, Claude,cursor,copilot VS Code, Visual Studio, Eclipse ,Maven,GitHub ,GitLab
Soft Skills: Analytical | Collaborator | Leader | Adaptable|Communication
Languages Known: English, Hindi and Marathi

EXPERIENCE

Associate Software Engineer at Coditas Solution LLP,Pune
(Fullstack Developer) **July 2025-Present**

• Developed responsive and interactive user interfaces using React.js and modern JavaScript (ES6+).
• Utilized React Hooks (useState, useEffect, useReducer, useLocation, etc.) to manage component state and lifecycle.
• Developed an enterprise-grade GenAI knowledge assistant that enables users to upload documents and interact with them through a context-aware conversational interface.
• Consumed RESTful APIs using Fetch or Axios and rendered dynamic data on the frontend.
• Participated in code reviews and team meetings to ensure code quality and consistent UI patterns.
• Built a complete RAG pipeline using document ingestion, text extraction, chunking, embeddings, PostgreSQL with pgvector, semantic similarity search, and LLM-based response generation.
• Integrated Groq LLMs for low-latency response generation and implemented both standard and streaming AI responses.
• Designed the backend using FastAPI, SQLAlchemy, repository/service architecture, and PostgreSQL for scalable API and data management.
• Implemented JWT-based authentication and authorization, secure bcrypt password hashing, user registration/login, and role-based access control.

Full Stack Developer Intern at BETECHNOS TECHNOLOGY PVT.LTD Pune
August 2024-Feburary 2025

- Designed and implemented a Monitoring System in REACT to enhance Responsive web design
- Version Control: Knowledgeable in using Git and GitHub for version control and collaborative development
- Performance Optimization: Basic understanding of optimizing web performance through techniques such as lazy loading, code splitting, and minification APIs: Experience with integrating RESTful APIs to enhance application functionality

Web developer at Viafye Web Solution
June 2024 -August 2024

- Designed and implemented a Monitoring System in REACT to enhance Responsive web design.
- Version Control: Knowledgeable in using Git and GitHub for version control and collaborative development Tools & Software: Comfortable with development tools such as VS Code, Chrome Developer Tools, and Figma

PROJECTS

DevGraph AI — Enterprise GenAI Knowledge Assistant
Python, FastAPI, PostgreSQL, pgvector, SQLAlchemy, Alembic, Groq, JWT, RAG

- Developed an enterprise-grade GenAI knowledge assistant that enables users to upload documents and interact with them through a context-aware conversational interface.
- Built a complete RAG pipeline using document ingestion, text extraction, chunking, embeddings, PostgreSQL with pgvector, semantic similarity search, and LLM-based response generation.
- Integrated Groq LLMs for low-latency response generation and implemented both standard and streaming AI responses.
- Designed the backend using FastAPI, SQLAlchemy, repository/service architecture, and PostgreSQL for scalable API and data management.
- Implemented JWT-based authentication and authorization, secure bcrypt password hashing, user registration/login, and role-based access control.
- Designed a multi-tenant data model consisting of Organizations, Workspaces, Projects, Users, Documents, Document Chunks, and Chat Sessions.
- Implemented conversational memory by storing chat history and incorporating relevant previous messages into RAG prompts.
- Added document source tracking to provide users with relevant document and page references for generated answers.
- Used Alembic for database schema versioning and migrations and implemented PostgreSQL vector search using cosine similarity.

DishDesk – Reviews & Menu Management Platform for Hotels
Tech Stack: React.js, React Hooks, React Router v6, useReducer, JavaScript, HTML, CSS

- Developed a hotel management platform with separate modules for Admin, Hotel Owners, and Customers using React.js.
- Implemented React Hooks (useState, useEffect, useMemo) and useReducer for efficient and scalable state management.
- Configured React Router v6 with protected routes and programmatic navigation to ensure secure and seamless user workflows.
- Built hotel owner functionalities including hotel profile management, menu creation and updates, order tracking, and performance monitoring.
- Developed customer features to browse hotels, view menus, and submit ratings and reviews.
- Designed an Admin Dashboard to manage users and hotels, monitor platform activities, and visualize hotel revenue through analytics.
- Created reusable React components and maintained a modular folder structure to improve code maintainability and scalability.
- Optimized API integration and component rendering to enhance application performance and user experience.
